Naples**

**PROJECT: ART IN MATHEMATICS**

**TITLE:** My city it takes shape

**INTRODUCTION**

The second stage of our project within the Comenius is in continuity with the previous one. The choice of an artistic interpretation of our city through geometric shapes arose from the awareness that painting offers the child an experience full of educational value, and from the desire to motivate in children an attitude of research and exploration towards quantitative and geometric aspects of our world.

Art helps to stimulate in children multiple forms of knowledge complementing the purely notionistic ones.

Methodology: Collection of photos, postcards and paintings about our city. Projection of slides, imagination and references of the beauty of Naples to geometric shapes: Vesuvius, historical Pine, Faraglioni of Capri, Plebiscite square, Business Center, Sea.

**Objectives**

Recognition of geometric shapes in the everyday world. Play with the forms also through the pursuit of geometry in art.

- Develop the spatial vision to search for and recognize in the reality the geometric shapes and their characteristics
- Take possession of a space inside and outside
- Promote the spatial imagination to develop the ability to see with "the eyes of mind" three-dimensional shapes
- Improve the ability of linguistic expression, "telling" the experience
- Facilitate the matching of children with art for a basic aesthetic literacy.

TEMPI: Marzo-Aprile

TIMES: March-April

SPACES: painting workshop

CHECKING: realization in group of the painting "my city it takes shape". Using watercolors.

Teachers:

Cutolo Maria  
Coppola Antonietta  
Bossa Rosa
